## Typage

## Exercice 1:

```
module AstType =
struct
(* Opérateurs binaires existants dans Rat - résolution de la surcharge *)
type binaire = Fraction | PlusInt | PlusRat | MultInt | MultRat | EquInt |
EquBool | Inf
(* Expressions existantes dans Rat *)
(* = expression de AstTds *)
type expression =
 | AppelFonction of Tds.info_ast * expression list
  | Ident of Tds.info ast
  | Booleen of bool
  | Entier of int
  | Unaire of AstSyntax.unaire * expression
  | Binaire of binaire * expression * expression
(* instructions existantes Rat *)
(* = instruction de AstTds + informations associées aux identificateurs,
mises à jour *)
(* + résolution de la surcharge de l'affichage *)
type bloc = instruction list
 and instruction =
  | Declaration of Tds.info_ast * expression
  | Affectation of Tds.info_ast * expression
 | AffichageInt of expression
  | AffichageRat of expression
 | AffichageBool of expression
  | Conditionnelle of expression * bloc * bloc
 | TantQue of expression * bloc
 | Retour of expression
  | Empty (* les nœuds ayant disparus: Const *)
(* informations associées à l'identificateur (dont son nom), liste des
paramètres, corps *)
type fonction = Fonction of Tds.info_ast * Tds.info_ast list * bloc
(* Structure d'un programme dans notre langage *)
type programme = Programme of fonction list * bloc
let taille_variables_declarees i =
  match i with
  | Declaration (info,_) ->
   begin
   match Tds.info_ast_to_info info with
    | InfoVar (_,t,_,_) -> getTaille t
```

notesTD3.md 16/12/2021

```
| _ -> failwith "internal error"
    end
| _ -> 0 ;;
end
```

## Exercice 2:

```
let rec analyse_type_expression e =
 match e with
  | AstTds.AppelFonction(ia, listExp) ->
  | AstTds.Ident(ia) ->
 | AstTds.Booleen(bool) ->
  | AstTds.Entier(int) ->
  | AstTds.Unaire(un, expr) ->
  | AstTds.Binaire(bin, expression1, expression2) ->
    let (ne1, te1) = analyse_type_expression expression1 in
    let (ne2, te2) = analyse_type_expression expression2 in
      if (te1 != te2) then
        raise (TypeBinaireInattendu (bin, te1, te2))
      else
        match bin with
        | Fraction ->
        | Plus ->
        | Mult ->
        | Equ ->
        | Inf ->
let rec analyse_type_instruction tf i =
 match i with
